Overview

This document introduces the *Accessibility Planning* series of videos. This series also includes written equivalents (this document is an example) in the form of PDF's for those who prefer text to video.

The purpose of the series is to explore the dimensions of institutional accessibility, focused on ICT accessibility. The approach is high level, addressing how to effectively plan and build an accessible institution. In the series, we will outline processes to review and analyze institutional accessibility, plan policies and practices based on that review, and address any required remediation to realize institutional accessibility goals.

This series targets accessibility advocates and stakeholders, especially administrators and managers in higher education responsible for accessibility decision making. It is aimed at those in a position to influence, make decisions, and impact, either as a participant or as a leader, accessibility planning and implementation at the institution.

TOPICS IN THIS SERIES

- Part 01: **Background:** Define ICT and ICT accessibility, review disability statistics, and summarize the need to address accessibility.
- Part 02: **Aspirations:** Propose goals and aspirations for an accessible institution and the implications of “ideal world” goals to requisite skills and support services.
- Part 03: **Standards:** Review major accessibility-related laws, guidelines, and standards.
- Part 04: **ICT Framework:** Outline the requisite institutional infrastructure to support accessibility and overview a methodology for reviewing and analyzing ICT accessibility needs and requirements.
- Part 05: **Responsibilities:** Review who is responsible for making content accessible, for making decisions about accessibility, and for addressing accessibility issues.
- Part 06: **ICT Program:** Outline the components of an ICT plan and program, including the accessibility statement, policies, recommendations, and remediation plans.

Additional topics may be added based on viewer response.
